

PULMONOLOGY

WHAT CAN WE LEARN FROM THORACIC RADIOGRAPHS IN COUGHING OR DYSPNEIC PATIENTS?

Interpretation of thoracic radiographs is perceived as one of the most difficult sciences in the world of diagnostic imaging. Thoracic radiographs are also one of the most commonly performed radiographic examinations in private practice. This lecture will have a case-based approach inviting the audience to participate in resolving the presented case-mysteries. Standardized interpretation routine, various thoracic patterns and common causes of dyspnea and coughing will be discussed by use of these clinical cases.
